TX | 860-932-2135 | yash97sde@gmail.com | [linkedin.com/in/yashsokalla](https://www.linkedin.com/in/yashsokalla)

## PROFESSIONAL SUMMARY

---

Full Stack Developer with 5 years of experience building scalable microservices and enterprise applications in Agile environments using Java, Spring Boot, React.js, and RESTful APIs. Proven expertise in end-to-end development — from responsive front-end UIs to cloud-native back-end microservices on AWS. Skilled in CI/CD pipelines, Agile delivery, and integrating GenAI tools (GPT, Claude) to accelerate development workflows.

## TECHNICAL SKILLS

---

**Languages:** Java, JavaScript, TypeScript, Python, PHP, SQL, HTML, CSS, C/C++

**Front-End:** React.js, Angular.js, Node.js, Redux, React Testing Library

**Back-End / Frameworks:** Spring Boot, Spring MVC, Spring Security, Spring Cloud Gateway, Hibernate, GraphQL, OAuth 2.0

**Cloud & DevOps:** AWS (EC2, S3, Lambda, EKS, ECS, IAM, ElasticSearch), Docker, Kubernetes, Jenkins, Maven, Git/GitHub, SonarQube

**Databases:** PostgreSQL, MySQL, Oracle, SQL Server, DynamoDB, Redis

**Messaging & Other:** Apache Kafka, RabbitMQ, JUnit 5, Cucumber (BDD), JMeter

## EXPERIENCE

---

**Epsilon** | *Full Stack Developer* | TX **Jun 2022 – Present**

- Designed and deployed **Spring Boot** microservices integrated with **React.js** front-end modules via RESTful APIs, delivering seamless end-to-end user experiences for a customer portfolio review and analytics platform serving enterprise clients across financial services.
- Implemented **AWS API Gateway** and **Spring Cloud Gateway** as API entry points, securing routes with **OAuth 2.0** via Okta and routing authenticated requests to downstream microservices using path predicates and filters.
- Integrated **Apache Kafka** for event-driven pipelines processing 500K+ messages/day and **Redis** as a distributed cache, improving throughput by 40% and reducing API response latency by 35% on high-traffic endpoints.
- Built and maintained **CI/CD** pipelines using Maven and Jenkins; enforced code quality via SonarQube and TDD with JUnit 5 and Cucumber for behavior-driven development across distributed services.
- Utilized **DynamoDB** to store and query customer portfolio data, enabling low-latency access patterns; deployed services on **AWS EKS** using Docker and Kubernetes.
- Leveraged **GenAI** tools (GPT, Claude) to accelerate unit test generation, code refactoring, API documentation, and migration tasks — reducing dev cycle time by ~20%.

**Dell Technologies** | *Full Stack Developer* | India **Jan 2019 – Dec 2020**

- Built responsive, accessible **React.js** UI components with **JavaScript**, **HTML5**, **CSS3**, ensuring consistent cross-browser user interfaces and achieving 98% sprint delivery rate within Agile/Scrum teams.
- Developed and maintained **Java**-based back-end modules following SDLC best practices, improving code reliability and reducing production defects by 25% across 3+ enterprise applications.
- Engineered back-end services using **Spring Boot** and **MVC** architecture for an internal device management and configuration tool; optimized SQL queries on Oracle, MySQL, and SQL Server databases, reducing average query time by 35%.
- Deployed cloud-based applications on **AWS** (EC2, EBS, S3, Lambda), improving deployment efficiency and reducing environment setup time by 40%.

## PROJECTS

---

**LinkedIn Job Application Agent** — Python + Claude API agent that scores job-resume fit, generates tailored cover letters, and auto-fills LinkedIn Easy Apply forms via Playwright with automated application tracking.

**Task Management App** — React.js and Node.js/Express CRUD application with JWT authentication, REST API, and PostgreSQL database.

## EDUCATION

---

**University of Texas – San Antonio** | Master of Computer Science | **Jan 2021 – May 2022**

**REVA University – Bangalore** | Bachelor of Computer Science | **Aug 2015 – Jul 2019**
